**McKinney, TX – January 17, 2023** – Vector Systems, Inc., a Texas corporation has acquired Dalnor Systems, Inc. The transaction is the result of a multi-generational relationship dating back to the '60s and was executed in the final hours of 2022. As part of the agreement Vector Systems acquires JoBell Products, a design manufacturer of Level switches that was founded in 1947. In addition, the Bonham facility, that has housed all three companies for many years consolidates under Vector Systems.

Mark Fangio and Jeanna Adamo, founding partners of Dalnor Systems, both are proud that the JoBell product will be carried forward and further expanded. “The addition of the Level Control business represents an opportunity for some stability and significant growth in Vector’s Global reach in the industrial control market.” Says Dustin Divinia, President of Vector. ## JoBell Products

Jo-Bell Products is a supplier of Float Activated Level Switches and Level Sensors and a provider of custom Level Detection Systems.

Our Switch Assemblies consist of standard Micro-Switches plus a magnetic operator that causes switch closure when in the proximity of a ferrous target.

The design is such that a physical barrier isolates the switch components from the liquid medium being measured. Our world wide installed product base dates from 1947 with many of our units having been in service for 60 years or more.
